CAUTION: *Ensure that ventilation is good.*

NOTE: *Mask the basecoated area (where PUR adhesive is to be applied) before next layer of paint.*

NOTE: *If any part of the windshield frame has been painted, glass primer must be applied to the body flange.*

NOTE: *When bonding using 2-component adhesive, the windshield must be positioned within 8 minutes.*

Apply adhesive to either the glass or to the body flange.

Hold the gun at right angles to the surface.

Ensure that the adhesive bead is continuous, a break in the adhesive bead can result in the adhesive join surface not being watertight.

Position the glass.

Check that the windshield is in the same position at both A-posts.

Place a few strips of masking tape on the glass and part way over the roof to prevent the glass from sliding down.

WINDSCREEN, REPAIR > WINDSCREEN, REPAIR [2018-2022] > GENERAL INFORMATION
