#### 1. PRECONDITIONING

If another DTC "Confirmation Procedure" was performed immediately before this task, make sure to OFF the power switch, exit the vehicle and close all doors (including the back door), and wait for at least 60 seconds until the combination meter OFF before starting the next test.

#### **CAUTION:**

While waiting, never operate the vehicle such as locking, opening, and closing doors. If operating it, results in the activation of ACC power supply according to the auto ACC function.

After the power switch OFF, there is time needed for data writing by the electric shift control module.

#### GO TO 2.

#### 2. CHECK FOR DTC DETECTION

## **(H)**With CONSULT

- 1. Set the vehicle to READY.
- 2. Press the P position switch to shift to the P position and wait for at least 5 seconds. (Press the P position for at least 1 second.)
- 3. Perform self-diagnosis for "SHIFT".
  - If more than one DTC is detected, also perform diagnosis based on the DTC Inspection Priority Chart (Refer to <a href="https://dx.doi.org/10.1007/journal.org/">DTC Inspection Priority Chart</a>.).

#### Is "P0852-00" detect?

YES>>

Refer to DTC Diagnosis Procedure.

NO-1>>

To check malfunction symptom before repair: Refer to Intermittent Incident.

NO-2>>

Confirmation after repair: INSPECTION END

#### 1. CHECK P POSITION SWITCH INPUT VOLTAGE

## **(P)**With CONSULT

- 1. Set the vehicle to READY.
- 2. Select "Data Monitor" in "SHIFT".
- 3. Select "P position switch 1 voltage" and "P position switch 2 voltage".
- 4. Operate the P position switch and measure the input voltage to the electric shift control module.

#### **CAUTION:**

Perform the operation safely with the wheels blocked, the brake pedal depressed, and the vehicle stopped.

Monitor item	Condition	Value/Status
P position switch 1 voltage	P position switch: Pressed	1.1 - 2.1 V
r position switch i voltage	P position switch: Released	2.7 - 3.2 V
P position switch 2 voltage	P position switch: Pressed	2.7 - 3.2 V
r position switch 2 voltage	P position switch: Released	1.1 - 2.1 V

## Without CONSULT

- 1. Set the vehicle to READY.
- 2. Operate the P position switch and check the voltage between electric shift control module harness connector and ground.

#### **CAUTION:**

Perform the operation safely with the wheels blocked, the brake pedal depressed, and the vehicle stopped.

+						
P position switch	Electric shift control module		-	Condition	Voltage	
	Connector	Terminal				
No.1		46		P position switch: Pressed	1.4 - 2.0 V	
110.1		Ground	P position switch: Released	2.8 - 3.2 V		
No 2	M203 M203 47		P position switch: Pressed	2.8 - 3.2 V		
110.2		4/		P position switch: Released	1.4 - 2.0 V	

There may be a difference between the value measured with a circuit tester and the CONSULT monitor value.

M203	48	Giodila	ivot existed

#### Is the inspection result normal?

YES>>

Replace electric shift control module. Refer to ELECTRIC SHIFT CONTROL MODULE: Removal & Installation.

NO>>

Repair or replace the error-detected parts.

#### 5. CHECK P POSITION SWITCH SENSOR GROUND CIRCUIT

- 1. Power switch OFF.
- 2. Disconnect electric shift selector harness connector.
- 3. Disconnect electric shift control module harness connector.
- 4. Check the continuity between electric shift control module harness connector and electric shift selector harness connector.

No.2	101203	47		

Is the inspection result normal?

YES>>

Due to the malfunction of the P position switch, replace the electric shift selector. Refer to <u>ELECTRIC SHIFT SELECTOR</u>: <u>Removal & Installation</u>.

Repair or replace the error-detected parts.

# **DTC DETECTION LOGIC**

DTC		CONSULT screen terms	DTC detection condition	
			Diagnosis condition	Power switch ON
			Signal (terminal)	Parking actuator control signal (U-phase, V-phase, W-phase)
P272A	00	Motor Driver Circuit	Threshold	Although all phases (U-phase, V-phase, W-phase) of the parking actuator control signal are de-energized, 1 of the phases is energized.  NOTE: Energized: Approx. 0 V  De-energized: 9 - 16 V
			Diagnosis delay time	

# **POSSIBLE CAUSE**

- Parking actuator relay (OFF stuck)
- Motor coil

(Parking actuator)

- Electric shift control module
- Harness or connectors

(Open of each circuit or ground short-circuit)

# **FAIL-SAFE**

- In case of malfunction in the P position: Shifting from the P position to any other position is prohibited.
- In case of malfunction in a position other than the P position: Shifting to the P position is prohibited.
